DETAILED ACTION

Reasons for Allowance

2. The following is an examiner's statement of reasons for allowance:

The prior arts of record disclose sensor comprising: a substrate arranged along a XY-plane of an XYZ three-dimensional coordinate system, and a working body receiving a force and located adjacent to said substrate with a predetermined distance. However, the prior arts of record are silent on the above combination with a flexible member made of silicon supporting said working body at a periphery thereof so that said working body is suspended and spatial deviation of said working body is produced by applying said force thereto; a fixing member fixing said flexible member to said substrate; and a transducer for transforming said spatial deviation into an electric signal that indicates a direction and a magnitude of said force, said method comprising the steps of:

providing a deviation electrode and a fixed electrode, said deviation electrode being located at a position which deviates along with said working body and said fixed electrode being fixed to said substrate so as to face said deviation electrode;

applying a voltage between said deviation electrode and said fixed electrode so that Coulomb force is produced which causes spatial deviation of said working body in an X-axis direction of said XYZ three-dimensional coordinate system

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
